

Expression	Result when recording	Result when replaying
<code>env &lt;- environment()</code>	0xABC (added to trace)	0x123 (0xABC in trace differs, thus 0xABC=0x123 added to the replacement table)
<code>rnd &lt;- runif(1)</code>	0.42 (added to trace)	0.42 (value in trace is not ENVSXP, so no need to search in the replacement table)
<code>env &lt;- .Call(C_return, env)</code>	0xABC (added to trace)	0x123 (0xABC in trace recognized as ENVSXP and searched for in the replacement table)
<code>useEnv(env)</code>	(uses env 0xABC)	(uses env 0x123 which is a valid env in this run)
